

QUALITY WATER NOTICE

The quality of your water is not something we take for granted! Our system's water is continuously tested to make sure we meet or exceed all drinking water standards established by the EPA. It is rare that we ever need to treat your water with chlorine, as it comes from a natural underground spring source that is fresh and pure. Please help us keep our water source clean by following a few simple steps.

CROSS CONNECTIONS

Contaminants or pollutants can flow back into the Resort's drinking water system because of directly or indirectly connecting a hose to anything. Such a connection is termed CROSS CONNECTION and is strictly prohibited.

Please only connect your hose to your RV. Do not wash your sewer connection, pets, vehicles, or ATVs.

"Y" HOSE CONNECTIONS ARE *NOT* ALLOWED

East Canyon Resort's on-site water manager checks the culinary water system routinely for any safety concerns. It has been determined that the "Y" Hose connection can cause a cross connection and may create up to 84 unregulated connections (garden hoses have accounted for almost 80% of the documented backflow contamination incidents in the nation). The Board of Directors has approved a No Use "Y" Connection Control Plan and has determined members may NOT, under any circumstances, use a "Y" hose connection.

THE FINE THE BOARD OF DIRECTORS HAS AUTHORIZED IS \$500

Use of a "Y" hose connection jeopardizes the safety of all our members and guests, as it may result in the contamination of our drinking water. For the safety and wellbeing of all, please do not use one of these devices.
